GENERAL NOTES

- 1) All parameters at 25°C unless otherwise specified.
- 2) Dielectric strength and insulation resistance are measured between input and output
- 3) Heat sinking required, for derating curves see next page.
- 4) Internal overvoltage protection included.
- 5) Internal overvoltage protection not included.
- 6) Use suffix -12, -24 or -36 to specify control voltage. For other values call factory Sample: **SSC800-25-24**
- 7) Operation below the specified minimum turn-on voltage may result in linear operation of the output and damage to the relay.

Transient Protection

All loads are inductive, even ones that are not so labeled. An inductive load will produce harmful transient voltages when it is turned off. The more perfect the switch, the larger the transient voltages; the MOSFET output is so nearly an ideal switch that the transient voltages produced by seemingly "non-inductive" loads can cause damage if not suppressed. Diodes should be fast recovery type with PIV rated greater than supply voltage.
